1. The first group of people who are interested in the results of the study are the researchers themselves. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

2. The second group of people who are interested in the results of the study are the patients. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

3. The third group of people who are interested in the results of the study are the doctors. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

4. The fourth group of people who are interested in the results of the study are the nurses. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

5. The fifth group of people who are interested in the results of the study are the patients' families. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

6. The sixth group of people who are interested in the results of the study are the patients' friends. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

7. The seventh group of people who are interested in the results of the study are the patients' colleagues. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

8. The eighth group of people who are interested in the results of the study are the patients' neighbors. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

9. The ninth group of people who are interested in the results of the study are the patients' community. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

10. The tenth group of people who are interested in the results of the study are the patients' country. They want to know if the treatment worked and if it was safe. They also want to know if the results are different from what they expected.

Signal sequence.

amino acids 1-23

Transmembrane domain.

amino acids 501-522

N-glycosylation sites.

amino acids 198-202, 425-429, 453-457

Tyrosine kinase phosphorylation site.

amino acids 262-270

N-myristoylation sites.

amino acids 23-29, 27-33, 112-118, 273-279, 519-525, 565-571

Prokaryotic membrane lipoprotein lipid attachment site.

amino acids 14-25

EGF-like domain cysteine pattern signature.

amino acids 355-367

Leucine zipper pattern.

amino acids 122-144, 194-216

094434-03101
